SUMMARY

Senior Software Engineer (Software Development Engineer III) with 10 years of experience

designing, developing, and delivering scalable distributed systems using Java, Spring Boot, Microservices, Kafka, Docker, and Kubernetes. Proven experience **leading teams of 4–5 engineers**, driving architecture and design decisions, mentoring developers, conducting code reviews, and delivering mission-critical applications in Agile environments. Strong expertise in building low-latency, high-throughput systems, RESTful APIs, and event-driven architectures. Skilled in system design, performance optimization, multithreading, database tuning, production support, and cloud-native application development.

EDUCATION

JNTUA, Andhra Pradesh Bachelor of Technology (B.Tech) – Computer Science Engineering 2015

EXPERIENCE

Senior Software Engineer at *Nuvama Wealth Management Limited*

Feb 2023 – Jul 2026

Domain: Electronic Trading & Wealth Management

- Working as part of the core backend engineering team responsible for developing highly scalable and secure wealth management and electronic trading platforms.
- Currently leading a team of 4–5 engineers and actively involved in architecture discussions, code reviews, production issue resolution, RCA, and mentoring activities.
- Designed and developed microservices using Java and Spring Boot.
- Built high-performance REST APIs for trading and portfolio management systems.
- Integrated broker APIs, payment gateways, and KYC platforms.
- Implemented authentication and authorization using OAuth2, JWT, and Spring Security.
- Optimized database performance through indexing, caching, and query tuning.
- Implemented multithreaded solutions to reduce latency and improve throughput.
- Conducted code reviews and established development best practices.
- Participated in sprint planning, design reviews, and production support activities.
- Successfully migrated legacy services to loosely coupled microservices.
- Improved platform scalability and maintainability.
- Played a critical role in production incident resolution and RCA activities.

Software Engineer at *Innoviti Payment Solutions*

Feb 2020 – Feb 2023

Domain: Digital Payments & UPI Processing

- Worked on large-scale payment processing systems handling high-volume financial transactions.
- Integrated multiple banking APIs for UPI payment processing.
- Developed scalable backend services using Java and Spring Boot.
- Built RESTful APIs for payment transaction processing.
- Optimized database performance through query tuning and indexing.
- Supported UAT, production deployments, and issue resolution.
- Implemented multithreading techniques for low-latency transaction processing.
- Reduced payment failures by stabilizing transaction workflows.
- Improved database performance significantly through query optimization.
- Delivered highly reliable payment processing services.

Domain: Closed Loop Payment System

- Worked on enterprise application development involving frontend, backend, and database technologies.
- Developed UI components using JSP, JavaScript, HTML, and CSS.
- Built backend modules using Spring MVC and Hibernate.
- Developed REST APIs and integrated frontend applications.
- Supported QA testing, deployments, and production issue fixes.
- Followed Agile software development practices.
- Implemented multithreading solutions for performance improvements.
- Successfully delivered multiple enterprise modules on schedule.
- Contributed significantly to feature enhancements and bug fixes.
- Built strong expertise in enterprise Java application development.

Project Highlights

- Developed high-performance microservices for financial transaction processing.
- Designed REST APIs consumed by web and mobile applications.
- Implemented secure authentication and role-based access control.
- Migrated monolithic applications to microservices architecture.
- Enhanced application performance through caching and database optimization.
- Implemented centralized logging, monitoring, and alerting solutions.
- Built scalable low-latency systems for trading and payment platforms.

TECHNICAL SKILLS

Programming Languages	Java 8/11/17
Frameworks	Spring Boot, Spring MVC, Spring Core, Spring Security, Spring Data JPA, Spring Cloud
Microservices	REST APIs, OpenAPI/Swagger, API Gateway, Service Discovery
Messaging	Apache Kafka
Databases	Oracle, PostgreSQL, MySQL, SQL Server
Caching	Redis cache
Containers	Docker, Kubernetes
Build Tools	Maven, Gradle
DevOps	Jenkins, SonarQube
Security	OAuth2, JWT, Keycloak
Monitoring	Log4j, Kibana
Version Control	Git, GitHub, Bitbucket
Search & Analytics	Elasticsearch, Kibana

DOMAIN EXPERTISE

Electronic Trading & Wealth Management | Payment Processing & UPI | Financial Services | Distributed Systems | Event-Driven Architecture | Low-Latency Systems

I, the undersigned, declare that to the best of my knowledge and belief this data correctly describe me and my qualifications.
